goodwill industries

Goodwill Industries of Northern New England delivers quality services in areas where our expertise intersects with community need, continually striving to create the strongest, most positive impact throughout Maine, New Hampshire and northern Vermont. It is our mission to enable individual, personal stability while creating engaged, sustainable communities. Goodwill. Work that works for you.

getting young lives back on track
family-centered rehabilitation

Goodwill's Pediatric NeuroRehabilitation Services offer comprehensive family-centered rehabilitation for the treatment of youth who have a neurological impairment. We provide developmentally appropriate assessments and individualized treatment planning tailored to the youth’s strengths and needs.

We believe that success in neurological rehabilitation is measured by the youth’s reintegration into their school and community. Because we understand the youth’s need to learn and play, we incorporate these activities into their individual and group therapy treatments.

We serve youth between the ages of seven and 18 with the following diagnoses: acquired brain injury; brain tumors; stroke; toxic exposure (from lead paint, huffing, mercury, solvents, pesticides); anoxia/hypoxia; epilepsy and/or seizure disorders.

returning to school and family life

Some of the methods we utilize in assisting with the transition process include:

- evaluation of the change in academic and psychosocial functioning following the injury
- neuropsychological assessments and recommendations for treatment planning
- communication with external providers (school, physician, insurance company)
- brain injury education and training for families and/or school representatives
- family education and counseling
- development of individualized transition plans
- attendance at Pupil Evaluation Team (PET) meetings
- recommendations for accommodations in classroom and home
- behavior management strategies for the youth, family and school
- access to external resources
- advocacy education
- language
- motor and sensory skills
- mood and personality
- social skills

paying for these services

We work with families to help find a balance between conserving the youth’s funding, maximizing their services and meeting their long-term needs.

Funding support can be found through:

- MaineCare*
- Katie Beckett*
- Anthem, Cigna, Aetna and other commercial insurers
- private pay
- Medicare B

*The regulations for MaineCare Rehabilitative Services require a diagnosis of Acquired Brain Injury for reimbursement.

following-up

We invite the youth that we serve and their families to participate in an annual survey regarding our neurorehabilitation services.
